In October, all states were in Phase 3 and Phase 4 of the NRP thus allowing the full movement of inter-state travel. These relaxations have encouraged more travelling activities within the country thus increasing demand for goods and services. The continuous dynamic economy activities will accelerate the recovery process of the businesses, and subsequently attribute to the increase in labour demand resulting in the creation of more job opportunities. The country's economy is most likely to pick up in the upcoming months indicated by better performance of the Leading Index. In line with this, gradual improvement in the labour market is anticipated in the particular period."
