DISCUSSION & CONCLUSION

Strategies for reducing dependency on
foreign labour

Background: Significance of Construction sector

With an average economic growth of **8.0 per cent** between 1986 - 1996, **Malaysia has been one of Southeast Asia's fastest developing countries** since the 1980s.

The significant role of the construction sector is reflected through **the reliance on and interlinkages with more than 120 industries** (CIDB, 2018). Numerous mega projects had transformed the country's physical landscape (Hays, 2022) providing multiple spills over effects up to this day.

Kuala Lumpur International Airport

Putrajaya

North-South Expressway

Petronas Twin Towers

Sepang International Circuit

Bakun hydroelectric dam

Problem statement

Construction sector **depended heavily on low-skilled foreign labours**. This could be due to the cheaper cost of this labour, constant availability, and high flexibility in terms of working conditions (CIDB, 2019).

This continuous reliance may result in **low skill levels among employees** and a **delayed uptake of new technology** ultimately cause **stagnation in productivity and wage growth**.

Objective

This study aims **to review the demand and supply of labour in Malaysia's construction sector**.

Official statistics by the Department of Statistics, Malaysia (DOSM) from 2010 to 2021.

	Data	Sources
Supply-side	Overall employment including by economic activity and share of citizenship	Labour Force Survey reports
Demand-side	Labour demand by economic activity which includes jobs, filled jobs and vacancies	Employment Statistics
Labour productivity	Value added and Labour Productivity	Labour Productivity report
	Value of construction work done	Quarterly Construction Statistics

Cross tabulations method

Cross tabulation in the Statistical Package for Social Science (SPSS) programme to quantitatively analyse the relationship between multiple variables in supply-side:

- Economic activity
- Citizenship
- Skill level

Chart 1: Employment, 2010 - 2021

Source: Labour Force Survey Report, Malaysia, DOSM

Chart 2: Annual percentage change of employment by economic activity, 2018 - 2021

Source: Labour Productivity, Malaysia, Q2 2022, DOSM

Despite the **marginal increase** in total employment in 2021 by **0.7 per cent**, further analysis of the economic activity found that the Construction sector **remained to record losses** in employment growth since 2019.

Findings: Labour Supply (cont.)

Chart 3: Employment by citizenship in Construction sector, 2011 - 2021

Chart 4: Employment of non-citizens in Construction sector by Status in employment, 2021

With a proportion of **85.6 per cent**, the private sector accounts for most of the non-citizen employment in the Construction sector, indicating a **dependence on foreign labour**.

Chart 5: Employment in Construction sector by citizenship and skill level, 2018 - 2021

Source: Labour Force Survey, Malaysia, DOSM

Non-citizens are mostly employed in low-skilled jobs in the Construction sector comprised of **more than two-thirds in 2021** while most citizens are hired for semi-skilled jobs.

Findings: Labour Demand

Chart 6: Jobs, filled jobs and vacancies in Construction sector, 2018 - 2021 & Q1 - Q2 2022

Source: Employment Statistics, Malaysia, DOSM

There is a **labour shortage** in the Construction sector as seen by the rise in job vacancies and drop in jobs filled.

Findings: Labour Demand (cont.)

Chart 7: Vacancies in Construction sector by skill level, 2018 - 2021 & Q1 - Q2 2022

Source: Employment Statistics, Malaysia, DOSM

More than half of the vacancies in the sector were concentrated in **semi-skilled jobs**, registering **57.0 per cent** in 2021.

Findings: Labour Productivity

Chart 8: GDP and Labour Productivity, Construction Sector, 2018 - 2021 & Q1 - Q2 2022

Annual percentage change (%)

Source: Labour Productivity, Malaysia, DOSM

Prior to the pandemic, labour productivity per employment **varied from 3.4 to 3.6 per cent**. In 2020, it **declined to 15.6 per cent** as a result of the pandemic and the MCO measures imposed. This effect persisted until Q1 2021 but recently rebounded in Q2 2022. However, labour productivity per hour worked is still on a declining trend.

Note: MCO - Movement Control Order

Value of construction work done

Chart 9: Value of Construction Work Done, Q1 2019 - Q2 2022

Source: Quarterly Construction Statistics, Malaysia, DOSM

As compared to the same quarter in the preceding year, the value of Construction work done **rebounded by 6.1 per cent** in **Q2 2022 to RM29.9 billion**, after three successive quarters of decline. A higher value has been recorded during the pandemic which was around RM 31 billion.

Discussion & Conclusion

1

The Construction sector in Malaysia **employs 1.2 million people**, accounting for **7.7 per cent of the total employment**. The **average productivity rate** for the Construction sector is **lower compared to most other sectors**. The reason for this is the continuous dependence on low-skilled foreign labour and the limited adoption of new technology or best practices.

2

This leads us to believe **that improving the quality of labour, technological adoption and operational procedures** in the Construction sector can boost productivity rates.

3

Wider adoption of mechanisation and automation to wean themselves off low-skilled workers and **hire more skilled ones** who in turn **help boost efficiency and productivity**.

4

Reskilling, upskilling, and accreditation programmes to develop skilled local talents. Imposing levies, improving governance institutions and migration policies, diversifying labour sources, and eliminating illegal migration. All of these could **mitigate the negative consequences** of reliance on foreign labour in the long term.

"STATISTICS BLOOM IN HARMONY"

Doesn't matter far or near
Strength in numbers
we don't live in fear

Birds of feather flock together
Statistics our form of adour
We, will always live it up

So let us live in solidarity
And in the world arena we'll succeed
It is statistics that will come to be
The reason we will bloom in
harmony

Everybody undivided
Data's where our hearts reside in
There will always be a bind

Just like fire that ignites
That's how brightly lit our dreams are
We'll reach higher than the stars

Sending love to one another
Leaving no one in a slumber
We will stand with unity

Mustering our courage while
Embracing our disparities
We'll achieve our victory

One dream with unity
One love with harmony
