

Kolokium Statistik

Tarikh : **4 dan 5 Oktober 2018** (Khamis dan Jumaat)
Masa : **2.30 petang - 5.00 petang (Khamis)**
8.00 pagi - 12.30 tengah hari (Jumaat)
Tempat : **Dewan Sigma**
Institut Latihan Statistik Malaysia,
Sungkai, Perak Darul Ridzuan.

Presentation by:

Kon Mee Hwa
Principal Assistant Director
National Accounts Statistics Division
Department of Statistics, Malaysia

Closing the Gaps in Economic Statistics for Sustainable Development

7-11 May 2018 | Bangkok, Thailand

Topic 1: Inclusive economic statistics for informed decision making

Social Accounting Matrix: The compilation and construction of Malaysia framework

 <p>Asia-Pacific Economic Statistics Week 2018 Closing the gaps in economic statistics for sustainable development 7-11 May 2018 Bangkok, Thailand</p> <p>Theme of APES 2018</p> <p>Topic 1:</p> <p>Inclusive economic statistics for informed decision making</p> <p>Title:</p> <p>SOCIAL ACCOUNTING MATRIX: THE COMPILATION AND CONSTRUCTION OF MALAYSIA FRAMEWORK</p> <p>by:</p> <p>Kon Mee Hwa Principal Assistant Director National Accounts Statistics Division Department of Statistics, Malaysia</p>	 <p>Asia-Pacific Economic Statistics Week 2018 Closing the gaps in economic statistics for sustainable development 7-11 May 2018 Bangkok, Thailand</p> <p>Asia-Pacific Economic Statistics Week Seminar Component Bangkok, 7 – 11 May 2018</p> <p>Name of author : Kon Mee Hwa[*]</p> <p>Organization : Department of Statistics Malaysia</p> <p>Contact address: National Accounts Statistics Division Level 3, Unit 01-05, Wisma Minion, 12th Miles, Sungai Besi Highway, 43300 Seri Kembangan, Selangor.</p> <p>Contact phone : +603-89479090 Email: konmeehwa@stats.gov.my</p> <p>Title of paper:</p> <p>Social Accounting Matrix: The compilation and construction of Malaysia framework</p> <p>Abstract (200-350 words)</p> <p>The first Social Accounting Matrix (SAM) was originally developed by Stone and Brown in year 1962. World Bank has embarked the study of SAM in the developing countries which begin with Malaysian economy in 1970. There was no development of Social Accounting Matrix for Malaysia prior to 1970. SAM Malaysia was studied by the World Bank consultants since 1976. Then, the Department of Statistics, Malaysia (DOSM) has continued the construction of Malaysia SAM and successfully launched the inaugural report of Malaysia SAM Statistics in 2017. This paper documented the current SAM framework for Malaysia. The aim of this paper is to provide sufficient information on the construction of Social Accounting Matrix in Malaysia. This paper describes the sources of data, the methodologies and approaches used in the compilations of Social Accounting Matrix in Malaysia. As a result, a comprehensive SAM framework has been developed and presented the Malaysia socio-economic system through integration of the economic and social statistics in a square matrix form. It captures the transactions and transfers of incomes and expenditures among all institutions namely households, financial and non-financial corporations, government as well as the rest of the world. Thus, SAM is a one-year snapshot of the economy's annual flows which served as a tool for policy making, fiscal analysis and monitoring Sustainable Development Goals (SDGs) indicators. It is useful to identify households' income distribution, possible data gaps in economic statistics and other related issues that are frequently raised in the debate among the researchers and economist.</p> <p>(249 words)</p> <p>Keywords: Social Accounting Matrix; income distribution; Malaysian economy.</p> <p><small>[*]Principal Assistant Director, National Accounts Statistics Division, Department of Statistics, Malaysia Special thanks to Mdm. Shafizemawati Shailei and Social Accounting Matrix team members for their fruitful contribution to this paper.</small></p>

Input-Output Model

Input-Output (IO) Tables demonstrate multi-dimensional structure of economic analysis:

- ✓ Production & Demand
- ✓ Investment & Capital
- ✓ Imports & Exports

IO has been commonly used in:

- ✓ national economy planning (Tia et al, 2006)
- ✓ regional analysis (Pietroforte et al, 2000)
- ✓ trade issues (Machado et al, 2001)

Limitation of Input-Output model:

IO does not show:

- ✗ Interrelationship between value-added & final expenditures
- ✗ Linkages among Industrial output, household income distribution and consumption

Extension of
IO

Social Accounting Matrix (SAM)

Sir Richard Stone

Social accounting
and economic
models

Stone, Richard

SAM is a powerful tool to show:

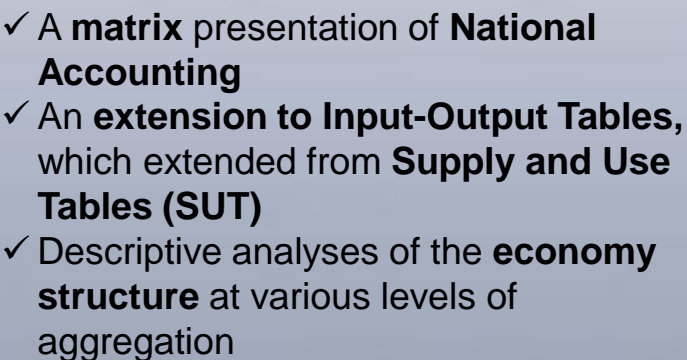

- ✓ Links between the supply and use tables (SUT) & institutional accounts.
- ✓ Entire circular flow of income at the macro level.
- ✓ Patterns of income received & expenditures incurred.
- ✓ Economic structure.

Advantages of SAM over IO:

- ✓ Provides additional information on the composition of households income and expenditure
- ✓ Households statistics can be analysed in a more consistent way.
- ✓ To measure the effectiveness of policy implementation that affecting the economy

Malaysia's Social Accounting Matrix launched

Posted on 20 November 2017 - 09:08pm
sunbiz@thesundaily.com

PETALING JAYA: The Department of Statistics Malaysia (DOSM) today launched the inaugural report on Malaysia's Social Accounting Matrix (SAM).

It said in a statement that SAM is a detailed framework that portrays comprehensive data for a particular year and it integrates the economic and social statistics as well as linkages among the institutions in Malaysia, namely households, financial and non-financial corporations, government and the rest of the world.

The balanced structure of SAM provides important input for the distribution of income and expenditure in fiscal analysis.

At macro level, SAM gives a snapshot on the Malaysia economy's flows in a year, while at micro level, it focuses on the income distributions for households, particularly compensation of employees by strata, income category, ethnic category and gender.

The chief statistician of Malaysia, Datuk Seri Dr Mohd Uzir Mahidin, noted SAM is one of the statistical product that is commonly used by the policy maker and researcher to measure the effectiveness factors of policy implementation that is affecting the economy of the country, including the flow of income sources and spending patterns for institutions.

"For the nation to achieve its vision, statistics for planning is very important"

YBhg. Dato' Sri Dr. Mohd Uzir Bin Mahidin
Chief Statistician Malaysia
