CHILDREN STATISTICS, MALAYSIA, 2021

INTRODUCTION

Children Statistics, Malaysia, 2021 presents selected statistics on population, health, education and child protection. These statistics were among the indicators used in measuring the children's quality of life and well-being in accordance with the concepts and guidelines recommended by the United Nations Children's Fund (UNICEF).

The first part of this publication presents infographic on selected children statistics, meanwhile the second part presents summary of findings by each areas. The third part shows statistical tables on the children in Malaysia as well as the time series statistics. The last part consists of technical notes for comprehensive explanation on the concept, definition and formula used to assist users in understanding the statistics published in this report.

POPULATION

Inter-state comparisons show that the highest percentage of children under-18 years is in W.P. Putrajaya at 37.2 per cent. This is followed by Terengganu (35.6%) and Kelantan (34.7%). Meanwhile, Pulau Pinang recorded the lowest percentage at 22.6 per cent.

The highest number of children under 18 years was recorded in Selangor (1,778.6 thousand), followed by Sabah (1,116.2 thousand) and Johor (1,060.9 thousand).

HEALTH

In 2020, certain conditions originating in the perinatal period were the principal causes of death for children under five years old at 37.2 per cent. This was followed by Congenital malformations, deformations and chromosomal abnormalities (29.3%), Pneumonia (2.8%), Transport accidents (1.3%) and Accidental drowning and submersion (1.2%).

Certain conditions originating in the perinatal period and Congenital malformations, deformations and chromosomal abnormalities showed an increase of 1.8 percentage points and 1.5 percentage points, respectively.

EDUCATION

The enrollment transition rate for primary to lower secondary level showed an increase of 0.6 percentage points in 2020 to 89.4 per cent as compared to 88.8 per cent in 2019. During the same period, the enrollment transition rate for lower secondary to upper secondary level increased by 1.4 percentage points to 97.9 per cent. Meanwhile, the transition rate of enrollment from upper secondary to post-secondary decreased significantly at 14.4 percentage points. The decrease was due to student enrollment for the June 2020 session being postponed due to the COVID-19 pandemic situation.
